

Stroke Prediction Report

Result: Low Risk

Risk Probability: %18.64

Clinical Risk Interpretation:

■ General assessment: The system has evaluated this patient as low risk. The system evaluates the patient using both model output and clinical risk rules and classifies them in the low risk group. The risk probability calculated by the model is 18.64%. Key factors affecting the risk assessment: high glucose level Monitoring is recommended for blood sugar/metabolic condition. This result is not a definitive diagnosis; it is intended for educational and clinical decision support purposes only.
